EDUCATION

University of Southeastern Philippines, Iñigo St., Bo. Obrero, Davao City September, 2026

BS in Computer Science Major in Data Science

Relevant Coursework: Programming Paradigm, Computer Networks, Data Science, Big Data, Machine Learning

Awards: Dean's Lister from 1st - 4th year, Magna Cum Laude

AMA Computer College of Davao, 123 General Malvar St., Davao City July, 2022

Relevant Coursework: Introduction To Java, MYSQL, Programming Ethics

Awards: With Honor

WORK EXPERIENCE

Undergraduate Thesis Research (USEP), *AI and Backend Developer* Mar 2025 - June 2025

- Developed an AI-powered obstruction detection system as part of undergraduate thesis in collaboration with Public Safety and Security Office (PSSO).
- Designed and implemented the backend and database architecture, API development, and AI service integration.
- Built and optimized object segmentation models using Python, leveraging Optuna for performance enhancement.
- Managed the end-to-end machine learning workflow, including dataset preparation, training, validation, and model evaluation.
- Integrated trained models into the application to enable real-time city monitoring and automated obstruction detection.

University of Southeastern Philippines, *AI Lead Developer* Mar 2025 - June 2025

- Led a small team focused on data annotation, model training, and AI-related tasks for a marine trash detection system in partnership with United Nations Development Program (UNDP).
- Managed the end-to-end AI pipeline, including dataset preparation, labeling, model training, and evaluation.
- Coordinated task delegation and workflow to ensure efficient progress in AI development.
- Contributed to integrating trained models into the system for real-time environmental monitoring.

Southern Philippines Medical Center, *Software Developer Intern* July 2025 - Aug 2025

- Designed and implemented database architecture to support scalable application requirements.
- Planned and structured backend architecture for maintainable and efficient system design for Payroll Sytem.
- Developed RESTful APIs using Django and Django REST Framework.
- Ensured clean API design, proper endpoint structuring, and efficient data handling.

PERSONAL PROJECT

Davao Jeepney Fare Guide – Mobile App Jan, 2023

- Designed and developed a mobile application to calculate jeepney fares based on distance and current fare regulations.
- Implemented fare logic with configurable parameters to adapt to policy changes.
- Focused on usability and real-world applicability for daily commuters.

CoinsPH Trading Bot – Trading Bot Jan, 2026

- Developed an automated trading bot integrating with the Coins.PH API for cryptocurrency transactions.
- Implemented basic trading strategies and logic for buy/sell signal execution, and notification using Discord Webhooks.
- Handled API communication, data fetching, and order execution securely.

LEADERSHIP EXPERIENCE

Computer Science Society (CSS), *4th year Representative/Technical Lead* Aug 2024 - May 2025

- Served as the 4th Year Representative, responsible for disseminating important announcements, updates, and academic information to senior students.
- Acted as Technical Lead for events, overseeing technical setup, systems, and overall execution of digital components.
- Ensured smooth operation of event technologies, including presentations, platforms, and coordination of technical teams.
- Collaborated with officers to support event planning, logistics, and member engagement initiatives.

TECHNICAL SKILLS

- *Languages:* Python, TypeScript, Java
- *Developer Tools:* Git, GitHub, VsCode, Postman, Docker, Vercel, Redis, Supabase, Xampp
- *Libraries/Frameworks:* Django, PyTorch, Tailwind, NestJS, FastAPI, React, Websockets
